

In this updated diagram, there are three actors: the Government Manager, the HR Advisor, and the Data Analyst. The Government Manager and HR Advisor are external users who initiate use cases, while the Data Analyst is an internal user who performs the analysis and produces the reports.

The Use Case Relationships are as follows:

The Government Manager initiates the "requests report from Data Analyst" relationship to request a report from the Data Analyst.

The Data Analyst initiates the "accesses data sources and performs analysis" relationship to access

In this diagram, there are two actors: the Government Manager and the Data Analyst. The Government Manager initiates each use case by requesting a specific report. The Data Analyst is responsible for accessing the required data sources, analyzing the data, and producing the reports in a user-friendly way.

There are four use cases: Produce Country Report, Produce City Report, Produce Capital City Report, and Produce Population Report. Each use case is represented as an oval, and the arrows indicate the relationships between the actors and the use cases.
